This year we chose a picture of a gold pour from one of our local mines. This photo demonstrates the process of smelting gold at about 2,100 degrees Fahrenheit and then pouring it into molds creating bars of gold which are then sent to a refinery and processed into pure gold. Mining is an important source of revenue for Humboldt County and also a principal source of employment for a large number of our citizens. The steady rise of gold prices has helped to soften some of the negative impacts resulting from the downturn in our national and state economies.
